

Sweet Corn

Kourtney needs your help! She is in charge of the group planting sweet corn for the school garden. She plants the corn on 5-27-20 and wants to harvest the corn when school starts on 8-7-20. She wants to plan accordingly. If the sweet corn she plants takes 8 days to germinate and 62 days to mature, what day will the corn be ready for harvest?

Kourtney will water the plants every day during the summer as needed and manage the weeds to be sure to grow the best yield possible.
