

How Much Water Do We Usually Get Per Year?

Visit: <http://climate.k-state.edu/precip/county/>

1. Select a county to complete your study: _____

How much rain did that county get in the last 5 years?

Year	In. of Rain.
2017	
2016	
2015	
2014	
2013	
Average: (total in. of rain / 5)	

2. When did the rain come? Precipitation that we receive as snow in December helps but doesn't have as much direct impact as rain during the growing season.

	2017	2016	2015	2014	2013	Monthly
Average						
January						
February						
March						
April						
May						
June						
July						
August						
September						
October						
November						
December						
Yearly Average						

3. Graph your data. Create a graph showing your average monthly precipitation over the year, January to December.

4. The planting season for corn is from May through September. Add up the total amount of average precipitation you would get in those months. It will take approximately 22 in. Do you have enough?
